PROFILE

Frontend engineer and product developer with commercial experience. Building web products since 2018, taking them from zero to MVP and an operating business. Core expertise in React, Next.js, TypeScript and frontend architecture. Worked in sprint-based product teams, managed Jira tasks, reviewed merge requests in GitLab and shipped products end-to-end.

EXPERIENCE AND PRODUCTS

TEXSOFT / product startup - Lead Product Developer -> Web Information Systems Developer

07.2025 - 07.2026

- + Joined at the startup stage as lead product developer, owning zero-to-one launch, architecture, prioritization and delivery. After launch, the startup became a standalone company; formal role: Web Information Systems Developer.
- + Built a commercial real-time messaging frontend with Feature-Sliced Design: Next.js 15, React 18, TypeScript, TanStack Query and Zustand; WebSocket messaging, LiveKit audio / video calls, file previews and responsive chat and group flows.
- + Worked in a commercial sprint cycle: planning and tracking in Jira, merge requests and code reviews in GitLab, Playwright E2E tests, GitLab CI / CD, multi-stage Docker builds and release coordination.
- + Took the product from an early stage to a repeatable team delivery process and concluded the engagement after the startup became a standalone company.

Independent products - Founder / Product Engineer

2024 - Present

Favor (favor.lol -> favor.deals)

- + Evolved a Web3 referral mini app into a live marketplace for contracts and deals inside Telegram: Next.js, Telegram integration, contract cards, direct and escrow deals, SEO pages, Telegram content import and hybrid monetization.
- + The graduation project was selected among the top six projects at the final demo day of the Startup as a Thesis track at ROSBIOTECH (June 2025).

loot.gifts

- + Co-built an ad-supported Telegram product with a backend partner, owning the Next.js / TypeScript frontend; reached up to 3,822 monthly users and 2,000 completed target actions.
- + Integrated the frontend with a Go API backed by PostgreSQL / Redis and shipped through Docker / Dokploy; generated 44.3K search impressions and 4.5K visits in one month.
- + Validated acquisition, ad monetization and unit economics with real traffic and my own budget.

@pilemidabot

- + Built the Telegram Mini App frontend with a partner; the team moved from concept to a working release in 3 days.

hostfi.app - realtime video

- + Built video conferencing with LiveKit client/server SDK: Next.js frontend and a separate LiveKit service in Docker Compose, with automated deployment through Dokploy.

Big Balls Birds - Lead Frontend Developer, Telegram Mini App

Summer 2024

- + Led frontend and DevOps in a four-person team, coordinating with backend and support; shipped the first mini app version in 2 months, with approximately \$5,000 in project revenue.

PNG Bazaar - Frontend Developer / Product Designer, Web3

2023 - 2024

- + Co-built an NFT creation platform on Mantle with two partners, owning product structure, UI / UX and frontend delivery. The product placed 30th in Mantle Journey and received a \$25,000 project payout; personal share was approximately \$4,300.

ROSBIOTECH - engineering lab and teaching

2023 - 2026

- + Laboratory assistant in engineering, prototyping and additive technologies; taught programming at the university technopark (10.2023 - 07.2024).
- + Part-time instructor at the International College of Technology (02.2026 - 03.2026).

Additional experience: web studio - first commercial team experience, 2 months in summer 2019.

TECHNICAL SKILLS

Core frontend

TypeScript, React 18 / 19, Next.js 15 / 16, App Router, SSR / ISR, HTML5, CSS, Tailwind CSS, Vite

Frontend architecture

Feature-Sliced Design (FSD), TanStack Query, Zustand, Zod, React Hook Form, component systems, responsive UI / UX

UI and integrations

Framer Motion, Three.js / R3F, Recharts, Lottie, REST / OpenAPI, SSE, LiveKit / WebRTC, Telegram Mini Apps, TON / TonConnect

Supporting backend

Node.js, Go, Prisma / GORM, PostgreSQL, Redis, JWT, cron

Delivery and quality

Git / GitLab, merge requests, code review, Jira, Playwright E2E, GitLab CI / CD, Docker / Compose, Dokploy

AI-assisted workflow

Gemini / Antigravity plan -> refine the MD plan -> Codex implementation -> review and fix the git diff -> independent Codex agent review -> validate its findings and fix confirmed issues -> open MR

EDUCATION

Russian Biotechnological University (ROSBIOTECH) - university studies; Favor graduation project

2020 - 2025

School of Programmers (informatics.ru) - foundational training

2018
